

## Setting tables with light

Smaller in size, but no less significant for that: table lighting fulfills a crucial role in several places, and in both private settings and office settings. Once again, we put together a selection of designs that we would take home with us without grumbling. With the right lighting pieces, you can set your interior apart from the rest while adding the desired atmosphere.

### Charles Zana

Charles Zana is a Parisian at heart. His work and personality are inextricably intertwined, and his sensitivity to his surroundings and lifestyle means that French culture is echoed in all his projects. Originally an architect, his oeuvre has long since moved beyond houses. Indeed, in addition to lighting, he is familiar with other types of furniture, including beds, cabinets, and more. His table lamps contain a distinct sense of pride; they flaunt different dimensions and do not shy away from challenging the eye. In terms of style, the designs are grounded in a more classic aesthetic, but the feel they exude is overtly contemporary and relevant to several generations of the future. Those looking for a striking piece that provides the perfect finishing touch are clearly in the right place. With his lighting, the designer communicates a compelling vision that threads together all the subcategories of his extensive range.
